Art Unit: 3748

DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 01, 2005 has been entered.

Claims 1-3, 6, 9, 11, and 14 were amended.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "turbine housing being located within the carrier housing" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruf et al. (Patent Number 4,716,735), in view of the admitted prior art to Norbert (Patent Number DE 34 39 738 A1/C2).

Ruf discloses an arrangement for an exhaust gas turbocharger with a carrier housing (10), the exhaust gas turbocharger (2,3) comprising:

a compressor wheel (Not shown, a well-known component of a compressor) in a compressor housing (See Figure 1),

a turbine wheel (Not shown, a well-known component of a turbine) in a turbine housing (See Figure 1),

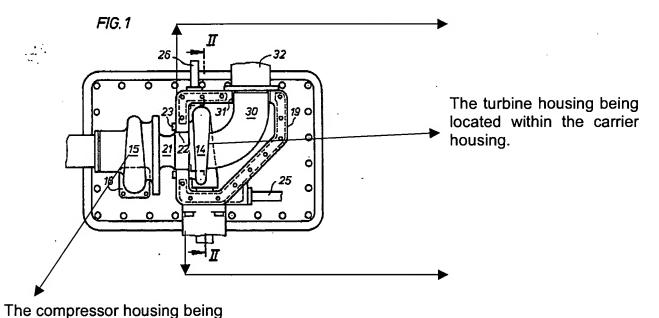

a bearing housing (1), and

Application/Control Number: 10/801,858

Art Unit: 3748

a shaft (4) adapted to extend through the bearing housing and to connect the compressor wheel and the turbine wheel (See Figure 2, and Column 2, lines 17-18).

However, Ruf fails to disclose the location of the turbine housing and the compressor housing; as well as, the recitation of "the bearing housing being mounted in and attached to the carrier housing by way of a fastening element in a direction perpendicular to an axis of rotation of the shaft".

located outside the carrier housing

Norbert teaches that it is conventional in the turbocharger art, to position the turbine housing within the carrier housing and the compressor housing outside the carrier housing (See attached Figure 1; Page 3, line 17-27; and Page 1, Paragraph [0003] of instant application).

It would has been obvious to one having ordinary skill in the art at that time the invention was made, to have positioned the turbine housing within the carrier housing and the compressor housing outside the carrier housing, as taught by Norbert, to improve the efficiency of the Ruf device, since the use thereof would have secured the turbine and minimized the total turbocharger weight.

Additionally, the recitation of "the bearing housing being mounted in and attached to the carrier housing by way of a fastening element in a direction perpendicular to an axis of rotation of the shaft", which is considered as a product by process claim is rejected over a prior art product that appears to be identical, although produced by a different process, the burden is upon the applicants to overcome forward with evidence establishing a obvious difference between the two. See *In re Marosi*, 218 USPQ 289 (Fed. Cir. 1983).

Allowable Subject Matter

Claim 3-8 and 11-16 are allowed.

Claims 2 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1-16 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Bosen et al. (Pub. Number US 2003/0007705 A1) discloses a bearing arrangement for turbo-machines.
- Petrovsky et al. (Pub. Number DE 32 26 690 A1) disclose a carrier for turbochargers.
- Ruetz (Pub. Number DE 103 36 978 B3) disclose a carrier housing for exhaust gas turbo-supercharger.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai-Ba Trieu whose telephone number is (571) 272-4867. The examiner can normally be reached on Monday - Thursday (6:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas E. Denion can be reached on (571) 272-4859. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
